M.Sc. Botany
Scheme of Examination

M.Sc. (Previous)

There will be six papers in theory, each of three hours duration, 100 marks each and two practical's carrying 150 marks each (10% marks are reserved for viva and 15% records in each examination). Each practical examination will be of 6 hours duration to be completed in one day.

Each theory paper will have 9 questions, out of which a student has to attempt 5 questions and the question No. 1 will be compulsory. The question No. 1 will carry 20 marks and will be of short type of questions with a limit of 20 words.

M.Sc. (Final)

There will be six papers, four compulsory and two elective in theory of 3 hours duration carrying 100 marks each and two practicals each as follows:

- i. Practical for compulsory papers of 200 marks of 8 hours duration to be completed in two days.
- ii. Practical for elective papers-100 marks of 4 hours duration to be completed in one day.

Each theory paper will have 9 questions, out of which a student has to attempt 5 questions and the question No. 1 will be compulsory. The question No. 1 will carry 20 marks and will be of short type of questions with a limit of 20 words.

Syllabus/CSC Pattern
pulsoy. The question No. 1 will carry 20 marks and will be of several short objective type questions such as multiple choice type, one line answer type, one word type and fill in the blanks type.

Unit-I

The dynamic cell: structural organization of the plant cell, specialized plant cell types, chemical foundation, biochemicals, charged ions.

Cell wall : Structure and functions, biochemistry, growth.

Plasma membrane: Structure, models and functions, role of ATPases, ion channels and transport receptors.

Plasmodesmata: Structure, role in movement of molecules and macromolecules, comparison with gap junctions.

Unit-II

Chloroplast: Structure, genome organisation, gene expression, photosynthesis, nucleo-plastidic interactions.

Mitochondria: Structure, genome organisation, biochemistry.

Plant vacuole: Double membrane, tonicity, transporters, as storage organelle.

Nucleus: Structure, nuclear pores, nucleo-cytoplasmic organization, DNA structure, DNA forms, replication, damage and repair, transcription, plant promoters and transcription factors, splicing, RNA transport, nucleolous, rRNA biosynthesis.

Restriction enzymes: Cleavage of DNA, site specific restriction, construction of a restriction map from the fragments, its application since, as genetic markers, RFLP and their use in plant breeding.

Ribosomes: Structure, site of protein synthesis, mechanism of translation, initiation, elongation and termination, structure and role of tRNA.

Protein sorting: Targeting of proteins to organelles.

Cell shape and motility: The cytoskeleton, organization and role of microtubules and microfilaments, motor movements, implications in flagellar and other movements.

Unit-IV

Cell cycle and apoptosis: Control mechanisms, role of cyclins and cyclin-dependent kinases, oncogenes and E2F proteins, cytokinesis and cell plate formation, mechanisms of programmed cell death.

Other Cellular organelles: Structure and functions of microbodies, Golgi apparatus, lysosomes, endoplasmic reticulum.

See the following Review Journals:

Annual Review of Plant Physiology and Molecular Biology.
Current Advances in Plant Sciences.

Trends in Plant Sciences.

Nature Reviews: Molecular and Cell Biology.

Suggested Laboratory Exercises:

1. Isolation of mitochondria and the activity of its marker enzyme, Nicotinate dehydrogenase (SDH).
2. Isolation of chloroplasts and SDS-PAGE profile of proteins to demarcate the two subunits of Rubisco.
3. Isolation of nuclei and identification of histones by SDS-PAGE.
4. Isolation of plant DNA and its quantification by a spectrophotometric method.
5. Isolation of DNA and preparation of 'cot' curve.

Paper-II : Chromosomes, Genetics and Cytogenetics

Scheme of Examination:

MAX MARKS: 100

Each paper will have 9 questions, out of which students has to attempt 5 questions including the question No. 1 which will be compulsory. The question No. 1 will carry 20 marks and will be of several short objective type of questions such as multiple choice type, objective answer type, one word type and fill in the blank type within a limit of 200 words.

CYTOLGY

Chromatin organization: Chromosome structure and packing, linking of DNA, molecular organization of centromere and telomere, nucleolus and ribosomal RNA genes, euchromatin and heterochromatin, karyotype analysis, banding patterns, karyotype evolution, specialized types of chromosomes, polytene, lampbrush, B-chromosomes and sex chromosomes, molecular basis of chromosome pairing.

Structural and numerical alterations in chromosomes: Origin, meiosis and breeding behaviour of triploid, tetraploid, inversion and translocation heterozygotes, Origin, occurrence, production and meiosis of haploids, aneuploids and euploids, origin and production of autopolyploids, chromosome and chromato heteroploidization, allopolyploids, types, genome constitution, mechanism of evolution of major crop plants, induction and characterization of trisomics and monosomics.

PAPER-II GENETICS

Genetics of prokaryotes and eukaryotic microbes: mapping the bacteriophage genome, phage mutagenesis, genetic recombination in phage, genetic transformation, conjugation and transduction in bacteria, genetics of mitochondria and chloroplasts, cytoplasmic male sterility.

Gene Structure and expression: Genetic fine structure, di-cis test, fine structure analysis of eukaryote viruses and their significance, RNA splicing, regulation of gene expression in prokaryotes and eukaryotes. Properly of option, catabolite repression, attenuation and antitermination.

Genetic recombination and genetic mapping: Recombination

B

11/8
०२
१/४
०८
०८

०८

Independent assortment and crossing over, molecular mechanism of recombination, role of RecA and RecBCD enzymes, site-specific recombination, chromosomal mapping, linkage groups, genetic markers, construction of molecular maps, correlation of genetic and physical maps, somatic cell genetics—an alternative approach to gene mapping.

Unit-III

CYTogenETICS

Mutation: Spontaneous and induced mutations, physical and chemical mutagens, molecular basis of gene mutation, transposable elements in prokaryotes and eukaryotes, mutation induced by transposons, site-directed mutagenesis, DNA damage and repair mechanisms, inherited diseases and defects in DNA repair, initiation of cancer at cellular level, carcinogens and oncogenes.

Sex determination, sex-linked inheritance, Y chromosome, ChrmD, Y-linked and achondroplastic multiple allele's and Y chromosome in man.

Oogenesis of eudiploids and trisexual heterozygotes, effect of meiosis on phenotype in plants, transmission of monosomes and aneuploids and their use in chromosome breeding in diploid and polyploid species, breeding behaviour and effects of structural heterozygotes, complex translocations, heterokaryon translocation, sister centriole, Robertsonian translocations, Bivalent translocations.

Unit-IV

Molecular cytogenetics: Nuclear DNA content, DNA probes, dot blotting and its significance, restriction enzymes—concept and techniques, multigene families and linkage mapping, in situ hybridization—concept and techniques, physical mapping of genomes, chromosome mapping, standard chromosome analysis, banding, microdissection, DNA microcloning, flow cytometry, and confocal microscopy in karyoplasmy.

Allotetra genetic transfer through chromosome manipulation, Transfer of whole genome examples from wheat, rye, oats and barley, transfer of individual chromosomes and chromosome segments, methods for detecting interchromosomal recombinants, nature and utility of alien addition and substitution lines, genetic basis of inbreeding and heterosis, exploitation of hybrid vigour.

Paper III : Biology and Diversity of Lower Plants :

Cryptogams

Scheme of Examination

Max Marks 100

1. This paper will have 9 questions, out of which a student has to attempt 5 questions including the question No.1 which will be compulsory. The question No.1 will carry 20 marks and will be of several parts. The other type of questions may be multiple choice type or fill in the blanks type or short type and fill in the blanks type.

Examination Date : 20/03/2013 Unit - I

Phycology: Algae in diversified habitats (terrestrial, freshwater, marine), thallus organization, cell ultrastructure, reproduction, (vegetative, asexual, sexual) criteria for classification of algae, pigments, reserve food, flagella, classification, salient features of Prostochlorophyta, Chlorophyta, Chrysophyta, Xanthophyta, Bacillariophyta, Phaeophyta and Rhodophyta : with special reference to *Microcystis*, *Hydrodictyon*, *Drepanothriopeltis*, *Ceratium*, algal blooms, algal biofertilizers : algae as food, feed and use in industry.

Q

(11)

Unit-II

Mycology : General characters of fungi; substrate relationship to fungi; cell ultrastructure, unicellular and multicellular organization; cell wall composition; nutrition (saprobic; biotrophic; symbiotic); heterothallism; heterokaryosis; parasiticity; recent trends in classification; Phylogeny of fungi; general account of Mastigomycotina, Zygomycotina, Ascomycotina, Basidiomycotina, Deuteromycotina, with special reference to *Ustilago*, *Coccidioides*, *Mucor*, *Mucorales*, *Polypora*, *Drechslera* & *Phoma*; fungi in industry, medicine and as food; fungal diseases in plants and humans; Mycorrhizae; fungi as biocontrol agents.

Unit-III

Bryophyta : Morphology, structure, reproduction and life history, distribution, classification, general account of Marchantiidae, Jungermanniidae, Anthocerotidae, Sphagnidae, Funariidae and Polytrichidae, with special reference to *Marchesinia*, *Notochylus* and *Polytrichum*; economic and ecological importance.

Unit-IV

Pteridophyta: Morphology, anatomy and reproduction; classification; evolution of sori; heterospory and origin of seed habit; general account of fossil pteridophytes; introduction to Palynosida, Lycopodiida, Schenopodiida and Pteropodiida; with special reference to *Lycopodium*, *Glechoma*, *Pteris*, *Sphaerostele* & *Onoclea*.

Suggested Laboratory Exercises

Morphological study of representative members of algae, fungi, bacteria, bryophytes and pteridophytes : *Microcoleus, Aulosira, Cocconeis, Pediasium, Hydrocoleum, Ulothrix, Ulothrix, Strebloclonium, Dicranellalpus, Cladophora, Coccidioides, Cladophora, Stemonitis, Ascospores, Zygospores, Mucor, Rhizopus, Yeast, Bimacella, Chrysotrichum, Pilobolus, Morchella, Melampsora, Phellinus, Polyporus, Drechslera, Puccinia, Penicillium, Aspergillus, Colletotrichum, Alternaria, Helminthosporium, Polypodium, Psilotum, Lycopodium, Selaginella, Equisetum, Ophiocaulus, Marsilea, Ophioglossum, Isoetes.*

"Symptomatology of some diseased specimens: White rust, downy mildew, powdery mildew, rusts, smut, ergot, groundnut leaf spot, root rot of sugarcane, millets, paddy blight, citrus canker, bacterial blight of paddy, angular leaf spot of cotton, tobacco mosaic, little leaf of potato, seedling blight, mango gall formation.

Study of morphology, anatomy and reproductive structures of bryophytes and pteridophytes.

Gram staining of bacteria.

Identification of fungal cultures : *Rhizopus, Mucor,*

Penicillium, Emericella, Chrysotrichum, Drechslera,

Puccinia, Poria, Colletotrichum, Graphium.

Cultivation methods, preparation of media and stains.

Classification of flowering plants-Diversity of Seed Plants

Classification of algae-Bacterial Diversity

Classification of fungi-Bacterial Diversity

PAPER IV: TAXONOMY AND DIVERSITY OF SEED PLANTS

Gymnosperms

Unit I

Introduction : Gymnosperms, the vessel-less and fruitless seed plants varying in the structure of their sperms, pollen grains, pollen germination and the complexity of their female gametophyte;

Evolution of Gymnosperms. Classification of Gymnosperms and their distribution in India.

Brief account of the families of Pteridospermales (Lyginopteridaceae, Medullosaceae, Caytoniaceae and Glossopteridaceae). General account of Cycadeoidales and Cordaitales

Structure and reproduction in Cycadales, Ginkgoales, Coniferales, Ephedrales, Welwitschiales and Gnetales.

Unit II

TAXONOMY OF ANGIOSPERMS

1. Aims, components, and principles of Taxonomy; Alpha and Omega Taxonomy, documentation and scope.
2. Systems of Angiosperm classification: Cronquist, Dahlgren, Thorne and APG-II.
3. International Code of Botanical Nomenclature: Principles, rules and recommendations; Taxonomic concept: Hierarchy, species, genus, family and other categories.

Unit III

Numerical Taxonomy- Principles, concepts, operational taxonomic units (OTU), data processing and taxonomic studies, taximetric methods for study of population variation and similarity- coding, cluster analysis, cladistics, cladogram.

Taxonomic literature: Floras, Monographs, Icons, Library, Manuals, Index, Taxonomic keys.

Taxonomic tools and techniques: Herbarium, Serological, Molecular techniques, GIS and Mapping biodiversity.

Paper - V : Plant Physiology and Metabolism

Scheme of Examination Max Marks : 100

Each paper will have 9 questions, out of which a student has to attempt 5 questions including the question No. 1, which will be compulsory. The question No. 1 will carry 20 marks and will be of short answer type of questions such as multiple choice type, one word type, one word type and fill in the blanks type.

1. Water Relation of plants : Unique physicochemical properties of water, chemical potential, water potential, apparent free space, movement of water, Soil-Plant-Air-mosphere Continuum (SPAC), control regulation of transpiration, signal transduction in guard cell.

2. Membrane Transport : Passive - non-mediated transport and aquaporins, Passive-mediated transport, ATP-driven active transport, Uniport, Symport, Antiport, Ion channels.

3. Amino Acids, Proteins and Enzymes : Nod factor, root nodule formation and nitrogen fixation, structure of amino acids, stereochemistry, Aromatic properties, synthesis of amino acids by reductive amination, GS-GOGAT system and transamination.

4. Structure of proteins : Primary, secondary, tertiary, quaternary and domain structure, reverse turn and Ramchandran Plot, protein stability : electrostatic forces, hydrogen bonding, disulfide bonding and hydrophobic interaction.

5. Enzymes : Structure and properties, substrate specificity, classification and mechanism of enzymic action.

Part-II

Carbohydrates : Classification, structure and function of mono-saccharides, polysaccharides and glycoproteins including starch, cellulose and pectins.

6. Photosynthesis : Photosynthetic pigments, absorption and translocation of radiant energy, photo-oxidation, light complexes of

कालान्तरिक-प्रधान

21
सेप्टेम्बर

18

48 - University of Rajasthan

Thylakoid membranes : photosystem I, cytochrome b₋f complex, photosystem II and coupling factors, photolysis of water and O₂ evolution, non-cyclic and cyclic translocation of electrons, water-water cycle, proton gradient and photophosphorylation, Calvin cycle, regulation of RUBISCO activity, control of Calvin cycle, C₄ pathway and its adaptive significance, CAM pathway, differences between C₃ and C₄ plants, glycolate pathway and photorespiration, chlororespiration and CO₂ concentrating mechanism in micro-organism.

Unit-III

Respiration : Anaerobic and aerobic respiration; amphibolic nature of TCA cycle, pentose phosphate pathway, glyoxylate pathway, oxidative phosphorylation, gluconeogenesis, high energy compounds ; their synthesis and utilisation.

Fat metabolism : Synthesis of long chain fatty acids, lipid biosynthesis, and oxidation.

Secondary metabolites : Biosynthesis and function of secondary metabolites with special reference to tannins, alkaloids and steroids.

Unit-IV

Plant growth regulators : Auxins - chemical nature, bioassay, physiological effects and mode of action.

Gibberellins - chemical nature, bioassay, physiological effects and mode of action.

Cytokinins - chemical nature, bioassay, physiological effects and mode of action.

Abscisic acid - chemical nature, bioassay, physiological effects and mode of action.

Physiology of flowering : Photoperiodism and vernalization.

Suggested Laboratory Work:

1. Effect of time and citrate concentration on the rate of reaction of enzymatic acid phosphatase nitrate reductase.
2. Effect of substrate concentration on activity of any enzyme and determination of its Km value.
3. Demonstration of the substrate inducibility of the enzyme by time reduction.
4. Extraction of chloroplast pigments from leaves and preparation of the absorption spectrum of chlorophylls and carotenoids.
5. To determine the chlorophyll a, chlorophyll b ratio in C₃ and C₄ plants.
6. Isolation of intact chloroplasts and estimation of chloroplast protein by spectrophotometry.
7. To demonstrate photophosphorylation in intact chloroplasts, to solvate the phosphoproteins by SDS-PAGE and perform autoradiography.

8. Extraction of seed proteins depending upon the solubility.
9. Determination of succinate dehydrogenase activity, its kinetics and sensitivity to inhibitors.
10. Separation of proteins by gel filtration chromatography employing Sephadex.
11. Preparation of the standard curve of protein (BSA) and estimation of the protein content in extracts of plant material by Lowry's or Bradford's method.
12. Fractionation of proteins using column chromatography by Sephadex G100 or Sephadex G200.
13. SDS-PAGE for soluble proteins extracted from the given plant materials and comparison of their profile by staining with Coomassie Brilliant Blue or silver nitrate.
14. Separation of isozymes of esterases, peroxidases by native polyacrylamide gel electrophoresis.
15. Radioisotope methodology, autoradiography, instrumentation (GM count and Scintillation counter) and principles involved.
16. Principles of colorimetry, spectrophotometry and fluorimetry.

Paper-VI: Microbiology and Plant Pathology

Max Marks : 100
 Pattern of Examination :
 Each paper will have 9 questions, out of which student has to answer 6 questions including the question No.1 which will be compulsory. The question No.1 will carry 20 marks and will be of short answer type of questions such as multiple choice questions, true or false, yes or no, word-type and fill-in-the-blank type questions.

Unit - I

Microbiology

1. Important landmarks in the history of microbiology.
2. Prokaryotes and eukarya : General account, ultrastructure, differentiation, metabolism, biology and economic importance.
3. Prokaryotic viruses and biological importance.
4. Viruses : Classification, characteristics and ultrastructure of viruses, isolation and purification of viruses, chemical nature, replication, transmission of viruses, cyanophages, economic importance.
5. Phytopathogens : General characteristics and role in causing plant diseases.

Unit-II

1. Scope and application of microbes in agriculture, industry, food, pollution and biological control of pests.
2. General account of immunity, allergy, properties of antigens and antibodies, antibody structure and function, affinity and anti-

body specificity. Monoclonal antibodies and their uses, antibody engineering, serology, types of vaccines; Preliminary account of Biofilms, biochips, biosensors and biostimulants.

Unit-III

Plant Pathology

6. History and scope of plant pathology : General account of diseases caused by plant pathogens. Pathogen attack and defense mechanism Physical, physiological, biochemical and molecular aspects.

Plant disease management : Chemical, biological, IPM systems, development of transgenics, biopesticides, plant disease clinics. Preliminary account of application of Biotechnology in plant pathology.

Unit-IV

Symptomatology, identification and control of following plant diseases:

Fungal diseases: Wheat (Rust, Smut, Bunt), Bajra (Green ear, ergot and smut) Penicill (rust).

Paddy (Paddy blight), Cotton (Wilt), Grapes (Downy mildew and powdery mildew).

Bacterial disease: Wheat (Tundu), Citrus canker.

Viral disease: Tobacco mosaic, Blindi yellow mosaic.

Phytoplasmatic disease: Little leaf of bean.

Nematode disease: Root-knot of vegetables.

Microbiology Laboratory Experiments (Microbiology)

Cultivation of microscope. Determination of dimensions of micro-organisms (suggested model organism: yeast, bacteria, cyanobacteria).

Cultivation media for autotrophic and heterotrophic microorganisms (cleaning of glassware, mineral media, complex media, solid media sterilization) (based on topics 1).

Isolation of microorganisms, streaking on agar plates/pour plate method (isolation of colonies presentation) (based on topics 2 and 3).

Determination of growth of a microorganism (model organism: *Escherichia coli*, effects of nutrients e.g. glucose, fructose, sucrose, principle of colorimetry/spectrophotometer) (based on topic 3).

Determination of microbial population size (suggested model organism: yeast, use of spectrometer, serial dilution technique, relationship between dilution and cell count, determination of standard error variability in cell count) (based on topic 4).

Preparation of Virography column using sand-brown mud, observations on temporal sequence of appearance of viruses (visual appearance, microscopic observations) (based on topic 5).

Observation on virus infected plants (symptoms) (based on topic 5).

Fermentation by yeast in test tube method, use of different substrates, e.g. glucose, lactose, cane sugar, starch) (based on topic 8).

Plant Pathology I

Diseases as per theory syllabus.

Skeleton Paper

M.Sc. (Previous) Group-I Practical Examination

Time : 6 Hours

MAX. : 150

Q.No.	Questions	Marks Allocated
1.	(a) Perform the given molecular biology exercise. (b) Perform the given exercise of cell biology / molecular biology.	16
2.	(a) Perform the given exercise of Genetics/Micro/Metabolism (b) Perform the given exercise of Cytogenetical Polycross chromosome	16
3.	(i) Identify two algae from the given mixture. (A) Draw labelled diagrams. Comment upon their significant characters and systematic. (ii) Make a suitable preparation of material 'B' so as show reproductive parts of the fungi. (iii) Draw well labelled diagrams, identify the fungi giving reasons. (iv) Make a suitable preparation of vegetative reproductive parts of the material 'C'. Draw labelled sketches. Write features of special interest and identify giving reasons.	8
4.	Identify the spots critically (6x3)	18
5.	Sessional notes	22
6.	WPA work	13

Skeleton Paper

M.Sc. (Previous) Group-II Practical Examination

Time : 6 Hours

MAX. : 150

Q.No.	Questions	Marks Allocated
1.	(a) Describe the material in scientific language. Assign it to the relevant family with reasons. Draw floral diagram.	16

Q.P.M

25

- (b) Prepare an artificial key of the given plant materials (A, B & C). 6
- (c) Make a suitable preparation of material 'D'. 6

- special interest, if any.
- (d) Make a suitable preparation of given material 'E' (reproductive part only) Draw labelled diagram, Identify it giving reasons. 6

Perform the physiology experiments as assigned to you. Describe the methodology and record your observations.

Exercise 'a' 20
Exercise 'b' 10

- (i) Perform the microbiological exercise given to you. Draw suitable diagram, describe methodology and record your observations. 10
- (ii) Prepare a suitable slide of the given microbiological exercise. Draw diagram, describe methodology and record your results. 7
- (iii) Prepare a suitable slide of the given material 'D' for histological study. Draw labelled diagram, Identify the pathogen giving reasons. 12
